Balfour Beatty Infrastructure, Inc.'s Western Region office serves California, Oregon and Washington. The teams specialize in highways and bridges, along with such complex projects as water and wastewater treatment plants, tunnels and rail systems.

Water and wastewater infrastructure projects are a major emphasis of the Western Region. Our long list of contracts includes vast projects that are among the largest the company has ever undertaken.

The region's seismic retrofits have helped bridges endure stress in earthquake-prone regions. Our portfolio includes seismic retrofit projects and rehabilitations. Balfour Beatty Infrastructure has also performed significant rail infrastructure projects in the Western Region.

Major highway projects in California include Route 405 in Culver City, CA, where teams expanded and improved five miles of highway and bridges.

Teams completed work on a \$90 million contract to expand and retrofit the Downtown Seattle Transit Tunnel with the latest rail technology. Balfour Beatty Infrastructure received the 2008 Marvin M. Black partnering award for this project.

The creation and care of essential assets
